DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter, which the applicant regards as his invention.

Claim 3 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 3 recites the limitation "the first fastener" in line 2. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

Claims 1-4 are rejected under 35 U.S.C. 102(e) as being anticipated by USPN 6,217,215 to Tomic. Tomic (Fig. 7) discloses a closure mechanism (570) comprising a first inter-lockable profile (571) having a longitudinally extending web portion and having a longitudinally

extending locking portion, the locking portion of the first profile having a plurality of continuous shaped ribs (574, 575, 576) extending there-along, the ribs having a central tip and barbs extending laterally at each side of the tip with the barbs providing a first interlocking contact area. A second inter-lockable profile (572) having a longitudinally extending web portion and having a longitudinally extending locking portion, the locking portion of the second profile having a plurality of continuous shaped ribs (578, 579) extending there-along with at least one of the ribs having a central tip and a pair of barbs extending laterally at each side of the tip. At least two of the ribs (577, 580) shaped with a distal end with a single barb extending laterally from the distal end and extending laterally to at least one of the ribs having a central tip with the barbs providing a second inter-locking contact area. A first plurality of continuous grooves (U-shaped or bowl-shaped recess areas) there-between the ribs of the second profile, the first plurality of continuous grooves receptive in at least one inter-locking relationship to the locking portion of the first profile.

Referring to claim 2, a second plurality of continuous grooves (rectangular shaped recess areas) is provided between the ribs of the first profile and receptive in at least one inter-locking relationship to the locking portion of the second profile.
